HOMECARE SOLUTIONS

Helping loved ones maintain their independence and quality of life.
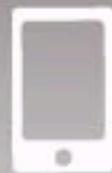

Making sure all is safe and well with a click of a button

24/7
Monitors the home 24/7 with real time updates and alerts.

Cloud based technology providing secure instant access.

Access cloud via smart phone/tablet or from your desktop via internet access.

Systems are fully flexible & adaptable to all individual needs & budgets.

Homecare solutions have developed a unique concept for the care of people in their home, using smart technology to create a flexible easy to use system. It gives reassurance to relatives and carers that their loved ones are safe and aids their independence.

The system has a dedicated secure cloud and free downloadable app for your phone or tablet. With an internet connection, it can be accessed anytime. Simply log in to check activity or receive immediate alerts via our app, by email and text when an emergency event occurs.

Sleep 02/29

Motion

Activity 03/01

Smoke

At home

Abroad

On the go

At work

Making sure all is safe and well with a click of a button

The system is wireless and extremely flexible made up with a network of sensors that are installed around the home. Inactivity, smoke, temperature, panic, Co2, gas and flood sensors will alert you immediately when an event has occurred.

Our system is different from panic care alarms that solely rely on a button being pressed in an emergency. This one allows you to check in at anytime and see that all is ok. You can view activity of individual rooms, seeing when motion last occurred and when doors have opened/closed.

You can also check on temperature of rooms and monitor sleep patterns. The cloud automatically stores data for one week, allowing you to review and analyse in chart format the activity and sleep patterns from the home.

It continually monitors the home 24/7 for emergency and just as important, non-emergency events. You can check in on your loved ones at your convenience without intruding on their personal space or independence.
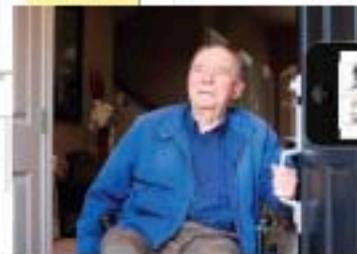

System Features can include:

Monitor sleep patterns
- Sensors detect & log when a person is asleep, restless or awake.

Motion & Activity report
- Sensors detect & log activity as it occurs and will send alerts if no activity is detected in a set period.

Emergency notifications
- When a panic button is pressed the alert is sent immediately.

Hazard notifications
- Various sensors can also provide alerts when dangerous levels are reached including; smoke, heat, CO2, gas & flood.

Room temperature report
- Sensors monitor the temperature of a room and will send alerts if it drops below set levels.

- All features have a seven day history log for analysis.
- System can be set as security system if home is empty for longer periods.
- All alerts activate app siren to your phone as well as emails and texts.

Making sure all is safe and well with a click of a button

Homecare solutions realise that our products need to not only be flexible for individual needs but also for your budget. Whether you simply want to monitor the access to and from a single door or would like a fully integrated system please get in touch.

Our aim is to work together discussing your needs and then make recommendations for the most appropriate solution.

This system is wire free and can be professionally installed or our engineers will programme the system for your own installation. The cloud service is supplied and chargeable monthly. Our prices are competitive with elderly care button only systems, but Homecare solutions can offer so much more.
